L7 ANSWER 1 OF 1 CAPLUS COPYRIGHT 2007 ACS on STN
TI Use of 2,3-alkylcarbonyloxybenzoic acids, derivatives and analogues therefrom in the treatment of tissue and cellular dysfunction, damage and injury in mammals
IN Stec, Karen; Rubinstein, Israel; Eiznhamer, David; Xu, Ze-qu; Flavin, Michael
AB A method for the treatment of cellular and tissue damage is disclosed. The inventive method comprises the use of 2,3-alkylcarbonyloxybenzoic acid and salts thereof for the prevention and treatment of dysfunction, damage, and/or injuries to organs, tissues and/or cells in human or animal subjects caused by diseases, infections and conditions such as pneumonia, coronavirus, multiple transfusions, trauma, ischemic-reperfusion dysfunctions, stroke, drug overdose, and severe acute respiratory syndrome. The 2;3-alkylcarbonyloxybenzoic acid may be used alone or in combination with other therapeutic agents such as antibiotics. The acid may be administered in any practical delivery form, and in free acid or buffered form.

TI Novel nanoparticulate nimesulide compositions
IN Bosch, H. William; Wertz, Christian F.
AB The present invention provides nanoparticulate nimesulide compns. The compns. preferably comprise nimesulide and at least one surface stabilizer adsorbed on or associated with the surface of the nimesulide particles. The nanoparticulate nimesulide particles preferably have an effective average particle size of less than about 2000 nm. The invention also provides methods of making and using nanoparticulate nimesulide compns. An aqueous solution of 1% (weight/weight) Plasdone S-630 was combined with 4.25 g of nimesulide (5% weight/weight) and stirred for 1 h at 4200 rpm with chilled water
(10°) recirculated through the milling chamber. The process yielded a colloidal dispersion of nimesulide with a mean particle size of 150 nm, a D50 of 124 nm, a D90 of 256 nm, and a D95 of 293 nm.

L4 ANSWER 3 OF 53 CAPLUS COPYRIGHT 2007 ACS on STN
TI Inductive QSAR descriptors. Distinguishing compounds with antibacterial activity by artificial neural networks
AU Cherkasov, Artem
AB On the basis of the previous models of inductive and steric effects, 'inductive' electronegativity and mol. capacitance, a range of new 'inductive' QSAR descriptors has been derived. These mol. parameters are easily accessible from electronegativities and covalent radii of the constituent atoms and interat. distances and can reflect a variety of aspects of intra- and intermol. interactions. Using 34 'inductive' QSAR descriptors alone we have been able to achieve 93% correct separation of compds. with- and without antibacterial activity (in the set of 657). The elaborated QSAR model based on the Artificial Neural Networks approach has been extensively validated and has confidently assigned antibacterial character to a number of trial antibiotics from the literature.

TI Dispersible pharmaceutical composition for treatment of mastitis and otic disorders
IN Britten, Nancy J.; Burns, John W.; Hallberg, John W.; Waldron, Niki A.; Watts, Jeffrey L.
AB A method is provided for treatment of an infective condition in a fluid-containing organ having a natural exterior orifice, such as the udder of a milk producing animal or an ear. The method comprises administering an antibacterial agent to the organ via the exterior orifice and administering in combination therapy with the antibacterial agent a second agent that is an anti-inflammatory agent, an analgesic and/or an antipyretic. The antibacterial agent and, optionally, the second agent, are administered as a pharmaceutical composition further comprising a vehicle that comprises an amphipathic oil that is water dispersible and ethanol

insol., microcryst. wax and a pharmaceutically acceptable non-aqueous carrier. Also provided is such a composition comprising the antibacterial agent and the second agent. The composition is readily dispersible in the fluid of the fluid-containing organ. A suspension to be administered by intramammary infusion was contained ceftiofur hydrochloride (micronized) 12.5 mg/mL, Labrafil M-1944CS 50 mg/mL, microcryst. wax 100 mg/mL, cottonseed oil q.s.

TI Effective attenuation of endotoxin-induced acute lung injury by 2,3-diacetyloxybenzoic acid in two independent animal models
AU Eiznhamer, David A.; Flavin, Michael T.; Jesmok, Gary J.; Borgia, Julian F.; Nelson, Deanna J.; Burhop, Kenneth E.; Xu, Ze-Qi
AB The pathol. of acute lung injury (ALI) is often modeled in animal studies by the administration of lipopolysaccharide (LPS), which results in an endotoxemia with sequelae similar to that seen in acute respiratory distress syndrome (ARDS). Here we report the results of two studies designed to examine the efficacy of a novel agent, 2,3-diacetyloxybenzoic acid (2,3-DABA), in the treatment of LPS-induced ALI. In two sep. animal models, 2,3-DABA was effective in significantly reducing lung microvascular permeability, a condition commonly seen in ARDS, which results in pulmonary edema and respiratory insufficiency. In each model, it is demonstrated that the mechanism by which 2,3-DABA exerts this effect occurs subsequent to the recruitment of neutrophils to the site of inflammation. Lung permeability was significantly decreased in both models by treatment with 2,3-DABA, suggesting that this agent, either alone or in combination therapy, may be useful in the treatment of ALI associated with ARDS.

TI Discrimination and selection of new potential antibacterial compounds using simple topological descriptors
AU Murcia-Soler, Miguel; Perez-Gimenez, Facundo; Garcia-March, Francisco J.; Salabert-Salvador, M. Teresa; Diaz-Villanueva, Wladimiro; Medina-Casamayor, Piedad
AB The aim of the work was to discriminate between antibacterial and non-antibacterial drugs by topol. methods and to select new potential antibacterial agents from among new structures. The method used for antibacterial activity selection was a linear discriminant anal. (LDA). It is possible to obtain a QSAR interpretation of the information contained in the discriminant function. We make use of the pharmacol. distribution diagrams (PDDs) as a visualizing technique for the identification and selection of new antibacterial agents.

L4 ANSWER 11 OF 53 CAPLUS COPYRIGHT 2007 ACS on STN
TI Structure-Based Classification of Antibacterial Activity
AU Cronin, Mark T. D.; Aptula, Aynur O.; Dearden, John C.; Duffy, Judith C.; Netzeva, Tatiana I.; Patel, Hiren; Rowe, Philip H.; Schultz, T. Wayne; Worth, Andrew P.; Voutzoulidis, Konstantinos; Schueuermann, Gerrit
AB The aim of this study was to develop a simple quant. structure-activity relation (QSAR) for the classification and prediction of antibacterial activity, to enable in silico screening. To this end a database of 661 compds., classified according to whether they had antibacterial activity, and for which a total of 167 physicochem. and structural descriptors were calculated, was analyzed. To identify descriptors that allowed separation of the two classes (i.e. those compds. with and without antibacterial activity), anal. of variance was utilized and models were developed using linear discriminant and binary logistic regression analyses. Model predictivity was assessed and validated by the random removal of 30% of the compds. to form a test set, for which predictions were made from the model. The results of the analyses indicated that six descriptors, accounting for hydrophobicity and inter- and intramol. hydrogen bonding, provided excellent separation of the data. Logistic regression anal. was shown to model the data slightly more accurately than discriminant anal.

TI Synthesis and in vitro antibacterial activity of catechol-spiramycin conjugates

AU Poras, Herve; Kunesch, Gerhard; Barriere, Jean-Claude; Berthaud, Nadine; Andremont, Antoine

GI

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB The first synthesis of siderophore conjugates of two macrolide antibiotics, spiramycin (I) and neospiramycin (II), which are unable to penetrate the outer membrane of Gram-neg. bacteria are described. These novel conjugates were prepared by regioselective acylation of a hydroxyl function of I and II with a dihydroxybenzoic Fe(III) complexing ligand linked via a carboxyl group containing spacer to the macrolide antibiotics. The preliminary biol. evaluation of these novel conjugates under standard and iron depleted conditions has shown that their antibacterial activity was comparable to that of I and II.

II

AB The invention relates to 1-arylpyrimidine derivs. I [R1 = H, alkyl, or aralkyl; Ar = 1-naphthyl or (un)substituted Ph; R4 = substituted Ph, substituted styryl, 1-methylcyclohexyl, 4-methylcyclohexyl, 4-oxo-4H-pyran-2-yl, or 2-oxo-2H-pyran-5-yl; R5, R6 = H or alkyl; R3 = H and R7R8 = oxo; or R3R7 = bond and R5R8 = bond], or pharmaceutically acceptable salts thereof, and their use as agents for treating allergic diseases. For example, reaction of 5,6-diamino-3-methyl-1-phenyluracil with 4-hydroxy-3,5-di-tert-butylbenzoyl chloride [prepns. given] in CHCl3 containing pyridine gave 79% title compound II. In tests for inhibition of picryl chloride-induced type IV allergy in mice and PCA in rats, I were comparable to the pos. stds. prednisolone and tranilast. Toxic effects were not observed in rats given I at oral dosages of 1000 mg/kg/day for 2 wk.

TI Use of 2,3 alkylcarbonyloxybenzoic acid in treating adult respiratory distress syndrome

IN Flavin, Michael T.; Nelson, Deanna J.; Borgia, Deceased Julian F.; Jesmok, Gary

AB Methods for treating adult respiratory distress syndrome (ARDS) which involves the administration of C2-18 2,3-alkylcarbonyloxybenzoic acids and salts are described. The therapeutic efficacy of 2,3-diacetoxybenzoic acid in combination with ibuprofen eas demonstrated in an ARDS sheep model.

TI Method and use of agents to inhibit protein polymerization, methods of identifying these agents, and use of the agents as antithrombotics and for the treatment of Alzheimer's disease

IN Bjornsson, Thorir D.

AB A method of inhibiting polymerization of target proteins by administration of compds. capable of inhibiting aggregation and subsequent transglutaminase-induced crosslinking of adjacent peptides of the target proteins is provided. These compds. are useful as antithrombotic agents and in the treatment of Alzheimer's disease. A method of screening and identifying compds. capable of inhibiting aggregation and subsequent transglutaminase-induced crosslinking of amyloid β-peptide is also provided.

TI Growth promotion of synthetic catecholate derivatives on Gram-negative bacteria

AU Reissbrodt, Rolf; Heinisch, Lothar; Mollmann, Ute; Rabsch, Wolfgang; Ulbricht, Hermann

AB Derivs. of benzoic acid, glyoxylic acid benzhydrazone, oxanilic acid and N-dihydroxybenzylidene-2,4,6-trimethylaminobenzene were investigated as catecholic iron chelators under iron-depleted conditions. Some of the compds. showed strong pos. reactions in the universal chemical siderophore assay (CAS): 3,4-dihydroxybenzoic acid, glyoxylic acid 2,3-dihydroxybenzhydrazone, N-3,4-dihydroxybenzylidene-2,4,6-trimethylaminobenzene. In particular these compds. also enabled removal of iron from iron-saturated transferrin. Using various siderophore indicator strains (Enterobacteriaceae, Pseudomonas aeruginosa and Aeromonas hydrophila mutants) in bioassays the following growth promotion could be detected: vicinal substituents (e.g. 2,3- or 3,4-) were essential, the carboxyamido group seen in benzoic acids and glyoxylic acid benzhydrazones contributed to a pos. reaction as well as the azomethin group (in N-3,4-dihydroxybenzylidene-2,4,6-trimethylaminobenzene). 2,3-Dihydroxybenzoic acid and the 2,3-diacetoxy substitute preferably promoted growth of Enterobacteriaceae mutants. In contrast, the 3,4-positioned compds. preferably promoted growth of P. aeruginosa mutants and A. hydrophila SB 22. Glyoxylic acid di(methoxycarbonyloxy)-benzhydrazones (2,3- and 3,4- positioned) including the 2,3-dihydroxy compound preferably enabled growth of the non-fermenters. N-3,4-dihydroxybenzylidene-2,4,6-trimethylaminobenzene supplied all mutants of Salmonella, Escherichia coli, Klebsiella, Morganella, P. aeruginosa and A. hydrophila with iron. Transport of glyoxylic acid 2,3-dihydroxybenzhydrazone depended on tonB, and required the involvement of the iron-regulated outer membrane proteins (IROMPs) FepA, Cir and Fiu.
